INTRODUCING  
CORAVIN system

### What is coravin?

*The Coravin System uses technology that keeps the cork in the bottle, where its been since the bottle was sealed. It allows us to pour glasses and know that instead of oxidising, the remaining wine will continue to age naturally.*

### Access

*A thin, hollow needle is inserted through the cork to access the wine.*

### Pressurise & Pour

*The bottle is pressurised with argon, an inert gas that has no effect on the taste profile of wine. The wine then flows through the needle and pours into the glass*

### Remove & Reseal

*The needle is removed from the cork and the cork reseals, protecting the wine from oxidation, enabling us to serve the wine glass by glass, weeks or months later.*
